^Rollover sample # to see lab name and ID and METHOD
 *MG/L=milligrams of contaminant per liter of water, equivalent to ppm (parts per million).
 µg/L=micrograms of contaminant per liter of water, equivalent to ppb (parts per billion).
 pCi/L=picocuries of contaminant per liter of water—a curie is a measurement of the rate at which a radioactive material decays.
 "<" (less than) means the contaminant cannot be accurately detected below the limit specified; the result can be considered zero.
